

# **ACKNOWLEDGEMENT**

During the period that I worked on this project, I relied on the assistance, resources and support of many people. I acknowledge with gratitude the help, guidance and encouragement given by many individuals in the completion of this work.

With immense pleasure, I would like to express my sincere gratitude to the almighty for their solemn presence throughout the project.

I am extremely grateful to Prof. Dr. O.A Joseph, Principal, College of Engineering, Vadakara for giving me an opportunity to complete my project successfully.

I express my sincere thanks to Mr. Prasanth T K, Head of the Department of Computer Applications, for his valuable suggestions during the completion of this project.

I am thankful to Mr. Prasanth T K, Project guide, for his expert guidance, constant motivation and valuable pieces of advice during the development of this project.

I am also thankful to all other staffs of the Department of Computer Applications, for their kind cooperation and help throughout the work.

Finally, I extend my sincere thanks to my dear parents and friends who helped me to build up confidence within me and whenever I was fed up with the heavy schedule.

# ABSTRACT

As the name specifies “**HOSTEL MANAGEMENT SYSTEM**” is a software developed for managing various activities in the hostel. For the past few years the number of educational institutions are increasing rapidly. Thereby the number of hostels are also increasing for the accommodation of the students studying in this institution. And hence there is a lot of strain on the person who are running the hostel and software’s are not usually used in this context. This particular project deals with the problems on managing a hostel and avoids the problems which occur when carried manually.

Identification of the drawbacks of the existing system leads to the designing of computerized system that will be compatible to the existing system with the system. Which is more user friendly and more GUI oriented. We can improve the efficiency of the system, thus overcome the drawbacks of the existing system.

- ✓ Less human error
- ✓ Strength and strain of manual labor can be reduced
- ✓ High security
- ✓ Data redundancy can be avoided to some extent
- ✓ Data consistency
- ✓ Easy to handle
- ✓ Easy data updating
- ✓ Easy record keeping
- ✓ Backup data can be easily generated
